

Using selenium complete the following task in separate **.py** scripts.

- Using SELENIUM, firstly open <https://demoqa.com/text-box> . Then do the task 1.

TASK 1 :

- **Write unit test case in Python to test the following case :** using Selenium you will input all the information in the 4 textboxes present. Upon pressing the Submit Button, all the input texts should be displayed below the button in a text area. Collect all those information from the printed area, and test with your originally input data.

Implement separate tests for separate textboxes.
